

Thermal Imaging

Standard Inspection

RedFish Inspection
with thermal imaging

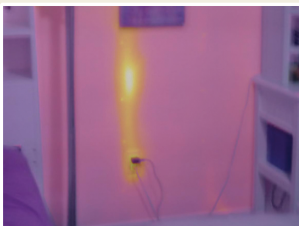

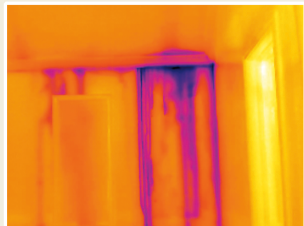

Q: What is thermal imaging?

A: Thermal imaging uses a specialized camera that can detect temperature anomalies.

Q: Why should I care about thermal imaging during my inspection?

A: The standard guidelines for an inspection in Texas only call for a visual inspection of a property. By choosing us for your inspection, we can find a variety of deficiencies that can not be seen by just the naked eye such as:

- Missing insulation
- Hidden water leaks
- Signs of rodents
- Hot electrical wiring

We include Thermal Imaging on every inspection, in every room

RedFish Inspections

3 BIG Reasons to Call RedFish Inspections

Same Day Reports:

Sewer Scope

One of the least obvious, yet most important features of your home, is the plumbing system.

There are many deficiencies that can cause slow draining or leaks including:

- Roots
- Foreign objects
- Improperly installed pipes
- Cracked pipes
- Mineral deposits

Ask us about our Sewer Scope service when booking your home inspection!
